Considerations

Details

Access, Permissions and Security: Suspension bridge

The Suspension Bridge is one of the, if not, the most popular attractions in Bristol and many people each day take pictures and record it. There won't be any problems with getting access unless we film on the bridge itself.

Access, Permissions and Security: HarbourSide

The HarbourSide might be a problem when filming as it is a very busy area and police or security might tell us to leave. However the harbourside is quite a big area so filming in different parts will get the job done

Access to power, Lighting, charging points: Suspension bridge

There will be no charging points at the suspension bridge so we will need to take spare batteries and keep an eye on the battery consumption. There will be natural lighting from the sun.

Access to power, Lighting, charging points: HarbourSide

There won't be any charging points at the HarbourSide so we will need spare batteries and to keep an eye on our battery consumption. There will also be natural lighting from the sun.

Noise and sound quality on location: Suspension bridge	It will be quite windy by the suspension bridge as it is on the edge of a cliff and there will be noise from cars and people. To solve this problem we will mute the audio and have Dans' voice over playing over it.
Noise and sound quality on location: HarbourSide	Yet again, it will be noisy so we will mute the audio picked up and play Daniels V/O over it.
Set dressing and props: Suspension bridge & HarbourSide	There won't be any props needed for filming this b-roll or any set dressing.
Weather conditions: Suspension Bridge	It will be windy so we will stay well away from the cliff edge. It might rain so we will have waterproof camera covers.
Weather conditions: HarbourSide	There will be wind and it is water side so we'll have to stay away from the water edge so that we and kit won't fall into the water.
Welfare of Cast and Crew on Location: <ul style="list-style-type: none"> • First Aid • Emergency procedure • Food and Drink • Toilets 	<p>The worst things that could happen on shoot are falling off the edge of the cliff or dropping kit off the edge. The floor might be wet and muddy so try not to slip and break the kit.</p> <p>At the HarbourSide, the same goes that we'll try not to fall in the water or drop kit in the water.</p>
